Abstract Information

Abstract Title: The National Journals Format Compliance With International Standards
Abstract: Background. Publication format analysis of the national scientific medical journals in terms of compliance with the international standards. The sources of information. RA laws, RA government decisions, HQC regulations of the RA Ministry of Education and Science, websites of national scientific medical journals, international standards of scientific medical publications. Results. From HQC list only five of 11 scientific medical journals have their own websites. Only 4 journals locate the published issues on their website. In other journals’ websites the date of the located issues goes back to 2013, 2012 and even 2011. Only in 5 journals’ websites the requirements to the authors are presented. Only in 2 journals’ websites instructions on the disclosure of conflict of interest are published. None of the journal presents the...
requirements to the authors related to mentioning the research
design and funding sources. Only in 3 journals the requirements
to the authors about statistics are published. Only 3 journals
published examples of the references and citations related to the
literature sources.
Conclusions. In the international information region it is necessary
to undertake rapid changes for increasing the level of scientific
medical publications and also the competency of the authors,
editors and reviewers of the scientific medical publications. It is
also important to develop national standards and guidelines for
planning and conducting scientific research and presenting the
results.
