Mobile No: 9088973526
Registration Date: 31-08-2015

Journal Poster Presentation Information

JournalPosterTrackID: WAME_JP_F6032
Journal Poster Abstract: The Western Pacific Surveillance and Response Journal (WPSAR) is a peer review journal on the surveillance of and response to public health events in the Western Pacific Region. WPSAR was established in 2010. It serves as a platform for people to share scientific and operational findings, and publish articles not limited to conventional research studies. WPSAR also aims to build capacity in scientific writing and encourages submissions from authors with little or no experience in publishing in peer-reviewed journals. WPSAR is free of charge for both readers and authors. Articles will be published online as soon as they have
completed the review and editing process. WPSAR was indexed in PubMed/MEDLINE in August 2013. Since then, the profile, visibility and readership of WPSAR are growing. To date, the journal has considerable reach to 28 countries around the world. Most of the readers are our targeted audience who work in public health practice and/or field epidemiology as epidemiologists, disease surveillance officers and public health specialists primarily for government, academic institutions or for public health organizations. To date, 20 issues of WPSAR had been published comprising 165 non-editorial articles. The most common of these were influenza, dengue, tuberculosis and emergency response. We also published three important articles about the Middle East respiratory syndrome coronavirus in our latest issue. It was noted that most of the WPSAR articles were on infectious diseases, although the surveillance of and response to other public health events and emergencies are also within our scope. As WPSAR represents a Region with an alarming number of disasters, we encourage submissions on responding to these events. To conclude, in the relatively short time since its inception, WPSAR has established itself as a good quality regional journal. WPSAR will continue serve as an information sharing platform for surveillance and response.
